

**Geothermal System Installation** - CEC is proud to announce another addition to the Sustainable Living Demo Home. AireServ Heating & Air Conditioning recently installed a geothermal heating and cooling system at the SLDH to be used in the home. The cost of the system was covered by Hoosier Energy & Whitewater Valley REMC who both encourage sustainability through conservation and alternative methods.

"I feel that the latest installment to our Sustainable Living Demonstration Home project, a closed loop geothermal heating & cooling system, is going provide an excellent benefit to both the residents of the home and for educational purposes. This system will allow us (CEC) to get a first hand look at how efficient, both environmentally and financially, this renewable heating & cooling source actually is and also provide an educational component for anyone interested in geo-thermal systems," said Jeremy Mussoni, CEC's Facilities & Grounds Director.

## **Special thanks:**

System: Donated by Water Furnace Inc.

Contractor / Installer: AireServ Heating & Air Conditioning

Install / Labor Costs: Donated by Hoosier Energy & WWV REMC
